# Locking Rabbet Jig

## for left-tilt table saws

The locking rabbet jig shown in ShopNotes No. 113 is designed for a right-tilt table saw. If your saw has a blade that tilts to the left, you'll want to use the drawing at right to build the jig. Doing this keeps the workpiece fully supported on the base to minimize tearout. The only difference is that the parts are mirrored from right to left. All of the part dimensions and procedure for building it are the same.
